Outpatient Rehabilitation

Helping patients regain their independence and overcome an injury or illness is our goal. Our high-quality, interdisciplinary approach gives patients individualized, hands-on care, education, and training for improved function.

Comprehensive outpatient services for children and adults:

- **A Full Continuum of Services**
  - Our comprehensive program means streamlined communication between services and the primary care physician, as well as offering a "one-stop shop" for rehabilitation needs.

- **Innovative Specialty Programs**
  - Our individualized orthopedics, pediatrics, neurologic, and return-to-work programs fill an enormous need for specialty rehabilitation services in the East Bay.

- **Benchmarking**
  - We’re constantly improving our treatment programs by comparing our outcomes against national benchmarks.

- **Convenient Clinics**
  - We offer a variety of conveniently located clinics throughout Oakland and Berkeley.

- **Physician Collaboration**
  - We work closely with the primary care physicians and specialists, providing updates and seeking input regarding goals and assessing progress.
